

Geographical Information Systems – Lab session 1

Frédéric Lassabe

1 Objectives and tasks

This work consists in setting GDAL up, and using it for simple data reading.

2 Setting up GDAL

For using GDAL in C++, you shall install C++ development tools, and GDAL development libraries. This must be achieved under Linux. Install the following packages:

- Debian based distributions: `libgdal-dev build_essential`
- RPM based distributions: `gdal-devel` and
`sudo dnf group install "C Development Tools and Libraries" "Development Tools"`

All programs will require to be linked against GDAL library, with the linker flag `-lgdal`.

3 Using GDAL

Based on the lecture, use GDAL to write a program that will read an OSM file (which will be provided on Moodle), and list its content as WKT.
