

Data Science Tuto: CIPHAR 100

We will focus on the "CIFAR-100" dataset and perform deep learning to classify the images in the dataset.

1. Download the dataset and **describe it**.
2. Display 2 images from the dataset.
3. Construct a **fully connected** artificial neural network for classification.
4. Explain the parameters of the constructed network.
5. Evaluate the performance and accuracy of your deep learning network.
Display them on a curve using Matplotlib.
6. Conclude.
